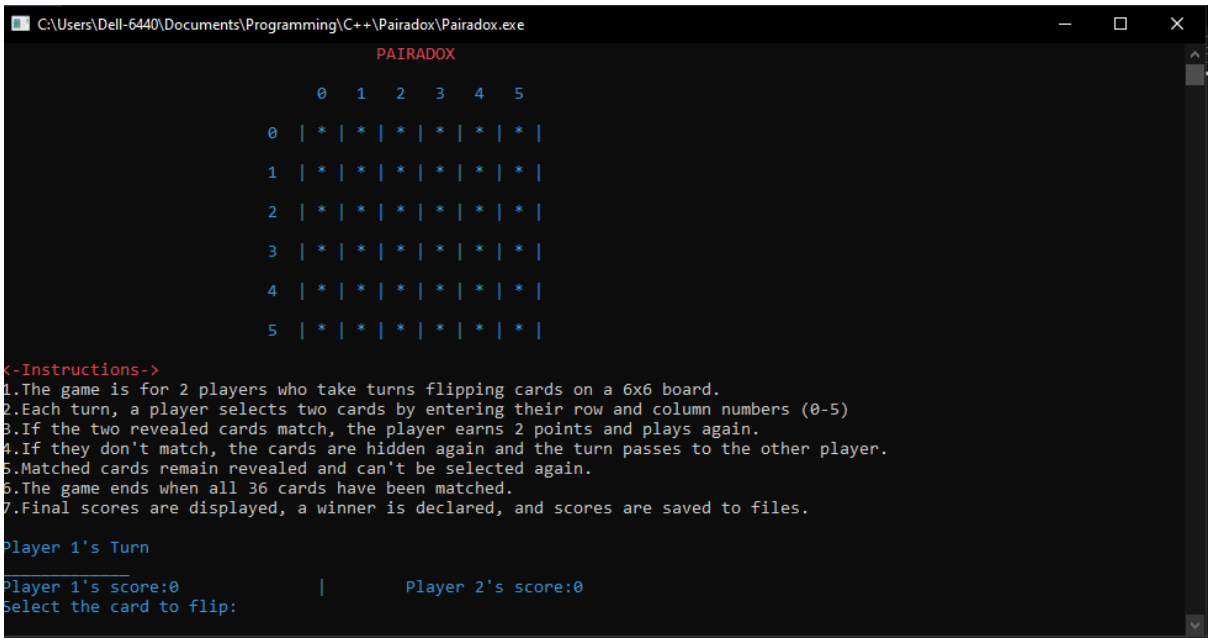
Programming Fundamentals(Semester Project)

Project name: **Pairadox**

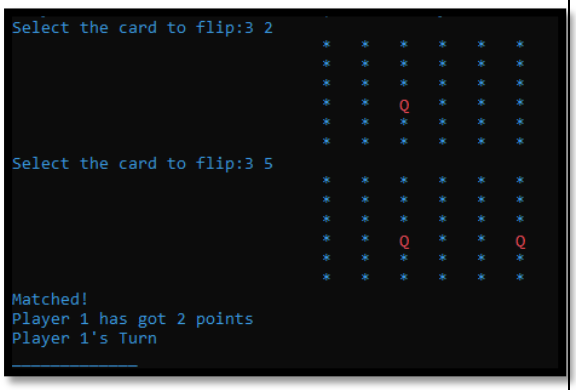
Description:-

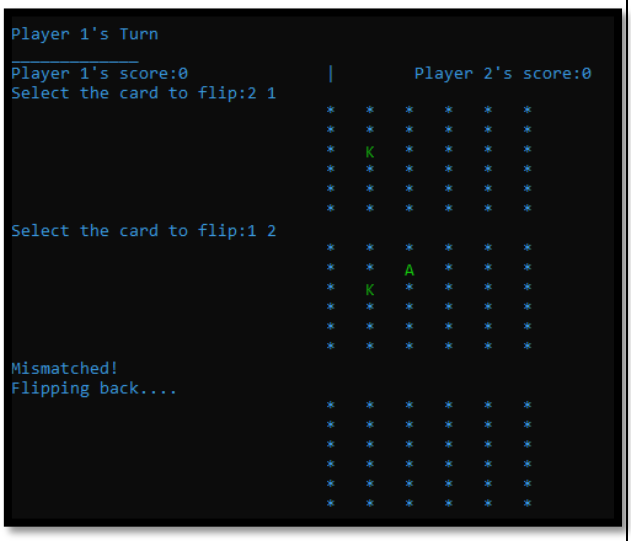
PAIRADOX is an exciting memory-matching game built in C++ for two players. Set on a hidden 6x6 grid, the game is packed with classic symbols like 'K', 'Q', 'A', and unique special icons.



- **Turn-Based Strategy and Scoring**

  Players take turns flipping two cards in search of matching pairs. A correct match awards 2 points and grants an extra turn, while mismatches flip back with a smooth animation that keeps the experience dynamic and engaging.

Matched menu	Mismatched menu
	




- **Smart Mechanics and Smooth Gameplay**

  Behind the scenes, the game leverages arrays, input validation, and a match-tracking system. These features ensure fair play by managing turns effectively and preventing repeated or invalid moves.

- **Endgame Highlights and Data Saving**

  When all pairs are matched, the game showcases colorful score displays and proudly announces the winner. To top it off, the final results are saved to a file—preserving the legacy of each showdown.

- **A Console-Based Test of Memory and Logic**

  Whether you're playing for fun or to sharpen your memory, PAIRADOX delivers a logic-rich console experience that’s both competitive and rewarding.
